261 BIODIVERSITY AND CONSERVATION Although India has only 2.4 per cent of the world's land area, its share of the global species diversity is an impressive 8.1 per cent.

BIODIVERSITY AND CONSERVATION - National Council of

The tree of life or universal tree of life is a metaphor, model and research tool used to explore the evolution of life and describe the relationships between organisms, both living and extinct, as described in a famous passage in Charles Darwin's *On the Origin of Species* (1859). The affinities of all the beings of the same class have sometimes been represented by a great tree.

Most ticks go through four life stages: egg, six-legged larva, eight-legged nymph, and adult. After hatching from the eggs, ticks must eat blood at every stage to survive. Ticks that require this many hosts can take up to 3 years to complete their full life cycle, and most will die because they don ...

The path towards the discovery of human hepatitis viruses started with the differentiation between 2 forms of transmissible jaundice. Infectious hepatitis linked to epidemic outbreaks of faecal-orally transmitted jaundice (termed hepatitis A) was differentiated from a parenterally transmitted jaundice with a relatively longer incubation period (termed hepatitis B).
