Sarcoids account for 39.9% of all equine cancers and are the most common cancer diagnosed in horses. There is no breed predilection for developing sarcoids and they can occur at any age, with horses three to six years old being the most common age group and males being slightly more prone to developing the disease. Sarcoids are also more prevalent in certain familial lines, suggesting that ...

Equine anatomy refers to the gross and microscopic anatomy of horses and other equids, including donkeys, and zebras. While all anatomical features of equids are described in the same terms as for other animals by the International Committee on Veterinary Gross Anatomical Nomenclature in the book Nomina Anatomica Veterinaria, there are many horse-specific colloquial terms used by equestrians
