WHAT IS COMPONENT TESTING? - TRYQA.COM

component based software testing pdf

Component-based software engineering (CBSE), also called as component-based development (CBD), is a branch of software engineering that emphasizes the separation of concerns with respect to the wide-ranging functionality available throughout a given software system. It is a reuse-based approach to defining, implementing and composing loosely coupled independent components into systems.

Component-based software engineering - Wikipedia

Component testing is also known as module and program testing. It finds the defects in the module and verifies the functioning of software.; Component testing is done by the tester. Component testing may be done in isolation from rest of the system depending on the development life cycle model chosen for that particular application. In such case the missing software is replaced by Stubs and ...
