Porcelain (/ ˈ p ɔːr s ɪ n /) is a ceramic material made by heating materials, generally including kaolin, in a kiln to temperatures between 1,200 and 1,400 °C (2,200 and 2,600 °F). The toughness, strength, and translucence of porcelain, relative to other types of pottery, arises mainly from vitrification and the formation of the mineral mullite within the body at these high ...

Applus+ has extensive experience in product and service evaluation and type approval within the maritime industry, as well as specialist technical knowledge related to the exploration for and extraction of oil and gas. This includes expertise in several types of production, storage and/or offloading unit (FPSOs, FSOs, FSUs, MOPUs), semi-submersibles, jack-ups, TLPs, spars and pipe-lay barges.

Maritime: testing (ndt), inspection and certification

The sea, the world ocean or simply the ocean is the connected body of salty water that covers over 70 percent of the Earth's surface. It moderates the Earth's climate and has important roles in the water cycle, carbon cycle, and nitrogen cycle. It has been travelled and explored since ancient times, while the scientific study of the sea—oceanography—dates broadly from the voyages
