In education, computational thinking is a set of problem-solving methods that involve expressing problems and their solutions in ways that a computer could execute.

Computational thinking - Wikipedia

Computational creativity (also known as artificial creativity, mechanical creativity, creative computing or creative computation) is a multidisciplinary endeavour that is located at the intersection of the fields of artificial intelligence, cognitive psychology, philosophy, and the arts.. The goal of computational creativity is to model, simulate or replicate creativity using a computer, to ...

StuartReid | On June 29, 2015. Some of the most interesting new research coming out of the Computational Intelligence Research Group (CIRG), which is applicable to numerous computational finance and machine learning optimization problems, is the development of fitness landscape analysis techniques. Fitness landscape analysis aims to characterize high dimensional fitness landscapes associated ...
