In computer science, a skip list is a data structure that allows  $O(\log n)$  search complexity as well as  $O(\log n)$  insertion complexity within an ordered sequence of  $n$  elements. Thus it can get the best of array (for searching) while maintaining a linked list-like structure that allows insertion- which is not possible in an array. Fast search is made possible by maintaining a linked hierarchy of ...

### **Skip list - Wikipedia**

Random number generators have applications in gambling, statistical sampling, computer simulation, cryptography, completely randomized design, and other areas where producing an unpredictable result is desirable. Generally, in applications having unpredictability as the paramount, such as in security applications, hardware generators are generally preferred over pseudo-random algorithms, where ...
