computer structure and logic pdf

A computer is a device that can be instructed to carry out sequences of arithmetic or logical operations automatically via computer programming. Modern computers have the ability to follow generalized sets of operations, called programs. These programs enable computers to perform an extremely wide range of tasks.

Computer - Wikipedia

Logic (from the Ancient Greek: *λογική*, translit. *logikē*) is the systematic study of the form of valid inference, and the most general laws of truth. A valid inference is one where there is a specific relation of logical support between the assumptions of the inference and its conclusion. In ordinary discourse, inferences may be signified by words such as therefore, hence, ergo, and so on.

Computer science is the study of the theory, experimentation, and engineering that form the basis for the design and use of computers. It is the scientific and practical approach to computation and its applications and the systematic study of the feasibility, structure, expression, and mechanization of the methodical procedures (or algorithms) that underlie the acquisition, representation ...

Home : Mathematics and Computer Science

Computer science is the study of manipulating, managing, transforming and encoding information.. There are many different areas in computer science. Some areas consider problems in an abstract manner, while some need special machines, called computers.. A person who works with computers will often need mathematics, science, and logic in order to design and work with computers.
