Learn how to use computer based communication, measurement and control technologies to design, commission and operate in industries associated with mining, energy, power, manufacturing, and oil and gas production.

Industrial Computer Systems Engineering

An embedded system is a computer that has been built to solve only a few very specific problems and is not easily changed. In contrast, a general-purpose computer can do many different jobs, and can be changed at any time with new programs for new jobs. An embedded system usually does not look like a computer, often there is no keyboard or monitor or mouse.
