Physics (from the Ancient Greek ????? physis meaning "nature") is the fundamental branch of science. The primary objects of study are matter and energy. Physics is, in one sense, the oldest and most basic academic pursuit; its discoveries find applications throughout the natural sciences, since matter and energy are the basic constituents of the natural world.

Physics became a separate science when early modern Europeans used experimental and quantitative methods to discover what are now considered to be the laws of physics. [page needed] Major developments in this period include the replacement of the geocentric model of the solar system with the heliocentric Copernican model, the laws governing the motion of planetary bodies determined by Johannes ...

Hopefully, as the framework is now maturing, more such papers will appear. Extent of this site's coverage of the Threshold Concept Framework This bibliography initially reflected the interests of the compiler but, over a decade, has been massively extended to cover most disciplines and topics in which there are published papers on the threshold concept framework.

The Threshold Concept

The laws of physics are fine-tuned for life—exactly what we would expect if the universe were intelligently designed.
