

CONCEPTS IN BIOLOGICAL OCEANOGRAPHY AN INTERDISCIPLINARY PRIMER

concepts in biological oceanography pdf

Ocean Biosciences Program (OBP) curricular groups: Biological Oceanography (BO) Biological Oceanography focuses on the interactions of populations of marine organisms with one another and with their physical and chemical environment.

The MSc Oceanography degree is designed primarily for students with no previous specialisation in marine science. So if you are a graduate with a degree in biological sciences, chemistry or materials science, physics, maths, environmental science, physical geography or related disciplines, and you have an interest in marine science or oceanography, this could be the course for you.

Levels, scope, and scale of organization. The scope of ecology contains a wide array of interacting levels of organization spanning micro-level (e.g., cells) to a planetary scale (e.g., biosphere) phenomena. Ecosystems, for example, contain abiotic resources and interacting life forms (i.e., individual organisms that aggregate into populations which aggregate into distinct ecological communities).

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...
