Psychology is the science of behavior and mind (not to be confused with neuroscience, which studies the neural underpinnings of psychological phenomena ex. neural circuits). Psychology includes the study of conscious and unconscious phenomena, as well as feeling and thought. It is an academic discipline of immense scope.

### **Psychology - Wikipedia**

There is a lengthy tradition in philosophy, religion, psychology, and cognitive science about what constitutes a mind and what are its distinguishing properties. One open question regarding the nature of the mind is the mind-body problem, which investigates the relation of the mind to the physical brain and nervous system.

### **Mind - Wikipedia**

As a science of the mind, psychology is equipped with the ability to analyze how being human affects the process of doing science. We are in a better position than most to see how scientists make unintentionally biased observations of the world and have the capacity to correct for this all too common mistake.
