As the delta-V for a mission goes up, the amount of propellant required goes up exponentially (or looking at it another way: the amount of payload shrinks exponentially). Large amounts of propellant are expensive, but the higher the mass-ratio the higher the likelihood that the spacecraft will not be reusable.

The 2000s were an exciting time for superhero movies. The decade started off with X-Men and Spider-Man, two films that reinvigorated the superhero genre, each successfully taking a different approach to the source material. If you revisit these now, it is easy to see why they were so influential and had the ability to launch their respective franchises.
